REFERENCE

It is our pleasure to mail you in a carton to which the envelope containing this letter is attached, our new Industrial Catalog which has just come off the press and to attach hereto a discount sheet showing your cost prices on the various items illustrated and described.

The discount sheet is punched to fit the catalog where it may be conveniently kept.

In addition to this catalog we have a separate book for our automotive trade in which lines which are not applicable to the industrial field are shown. We shall be glad to send you copy of this automotive catalog if you have interest in these purely automotive items.

May we direct your attention to the fly leaf of this catalog on which new lines of goods are mentioned?

Being a loose leaf catalog it can be kept always up-to-date by the insertion of such new pages as may later be printed.

Shortly a 4" x 6" pocket edition of this book in bound form will be ready for distribution. Any future changes in the large book will always be currently made in the small catalog inasmuch as we are printing only sufficient for immediate needs.

Will you please let us know how many of these small catalogs you would like for distribution to your customers? We will then ship them to you as soon as they come off the press, a few weeks hence.

We trust you will be pleased with this new book, and are

Very truly yours,

J. H. WILLIAMS & CO.

F. O. B. Shipping Point

Industrial Edition

This Industrial Catalog supersedes all previous issues, which are hereby withdrawn. A separate Catalog covering Automotive Service tools is available on request. All Prices are subject to change without notice.

Changes

"Superrenches", Double Head Engineers' pattern, now have even narrower heads and greater length. Eight larger sizes, Nos. 1038 to 1041 have been added.

List Prices have been changed for all "Superrenches", Tool Posts, Tool Post Wedges, Tool Post Rings and Handles—Balance, Crank and Machine.

Eliminations

The following stock lines, heretofore shown, have been discontinued:—

Obstruction "Superrenches" and Set 2040; Screw Wrenches—Agricultural, Machinists' Knife Handle and "Railroad Special"; all "Silent Salesman" Wrench Boards; "Bright" finish on Tool Makers' "C" Clamps; also, "Vulcan" Break-Out and Back-Up Tongs, Pipe Vise Clamp and Pipe Vise Mount.

All strictly Automotive Service Wrenches and Tools have been omitted; they are shown in separate Automotive Service Tools catalog.

In addition, a number of slow-selling items have been marked * to indicate they will be discontinued when present stock is exhausted.

Additions

Drop-Forged Wrenches—Hex-Box, Heavy pattern (Carbon steel); Adjustable (Carbon steel) and "Superjustable" (Chrome-Alloy); and the following new lines of "Superrenches"—Hex-Box, Heavy pattern; 15° Angle Duo-hex-Box—Long and Short patterns; 5 new Duo-hex-Box Sets.

"Non-Sparking" Safety Wrenches (Beryllium-Copper); Single and Double Head patterns.

"Superector" Ratchet Wrenches for heavy service. Instantly reversible. Detachable Sockets.

"Supersocket" Wrenches. An entirely new Midget line with 9/32" square drive; Straight Wall Bantam and Standard Sockets; many new sizes of Standard, Heavy Duty and Extra Heavy Duty Sockets; numerous new Handles and Parts, including Bantam and Standard Reversible Ratchets; Refrigeration Service Set.

"Vulcan" Chain Pipe Tools. "Supertongs", "Zephyr" Tongs, "Superchains", Vise Stand.

Tool Holders. Formed-Cutter Threading Tools; Light Boring Tools; Straight Line Knurls.

American Standard Bolts and Nuts

Data on American Standard dimensions are given pages 6 and 7, together with the piece numbers of Williams' Wrenches fitting individual bolts, nuts, etc. In addition, the tables on pages showing each line of wrenches include American Standard nuts.

Simplified Wrench Selection

Six different patterns of Williams' standard double-head Wrenches, with openings 5/16 to 1-5/8" for all popular sizes of nuts, etc., are tabulated on pages 8 and 9. Since the individual page number on which each wrench is listed is also shown, full data is readily available.

Cuts Illustrating Our Goods

Furnished to customers; if desired, we will prepare copy for printer and check proof.

Dimensions

Unless otherwise stated, all dimensions are in inches.

Electric Welding

We are prepared to electric-weld rounds up to and including 1 1/4 inch diameter; by this means we can supply several of our stock specialties, such as Rod Ends, with shanks of any reasonable length.

**Heat-treating, Annealing, Tempering and
Case-hardening Done to Order**

We have ample facilities for handling work of this class and solicit inquiries therefor.

Chemical Analyses and Physical Tests

Our laboratories are thoroughly equipped and we offer their services for such analyzing as may be required.

Estimates for Special Forgings

Furnished on receipt of model or drawing and specifications, including quantity.

Dies for Special Forgings

Charges for Dies and Tools include only a portion of their cost. We assume the risk of breakage and the expense of repair and maintenance. Tools are fitted to our equipment and are not subject to surrender. When inactive for three years after date of last order, they may be discarded at our option, without further notice.

Guarantee

We guarantee all our product, whether Standard Stock goods, as described in this catalog, or Special Forgings made to order, to be free from imperfections of workmanship and material. We will gladly replace, without charge, any which prove defective, but we cannot allow claims for labor or damages.

Cable Address, "Willrich, New York"

Codes: Western Union, Lieber's Standard, Lieber's 5 Letter, "ABC" 5th Edition, Bentley's.

We are sole makers of the following brands
of drop-forged specialties:

"SUPERRENCH"

"SUPERECTOR"

"VULCAN"

"AGRIPPA"

"SUPERSOCKET"

"SUPERJUSTABLE"

We were first to establish a uniform line of fifteen-degree angle Wrenches, since generally adopted.

This Catalog bound in "Pocket Size", furnished on request.

WILLIAMS' DROP-FORGED WRENCHES FOR
AMERICAN STANDARD BOLTS, NUTS AND CAP SCREWS

The following tables include the more popular patterns of Williams' "Superwrenches" (Chrome-Molybdenum) and Carbon Steel Wrenches for use with the full line of American Standard Nuts, etc., 1/4 to 3 inches bolt sizes. The tables are arranged to simplify the selection of the desired type of Wrench for any given size of bolt, nut, or cap screw. Many additional Wrench patterns and sizes are available.

STANDARD SPECIFICATIONS

FOR

WILLIAMS' ♦ "SUPERIOR" DROP-FORGED WRENCHES
*(Carbon-Steel)***Unfinished Wrench***"Maximum Utility with
Minimum Finish"*

Openings milled, shanks smooth,
sizes stamped on heads, hardened and
shot-blasted.

**Finished Wrench***"Maximum Finish at
Medium Price"*

Openings milled, surface and edges
smooth, sizes stamped on heads, hardened
and black enameled (baked on)—heads
polished bright.

All openings are slightly larger than stated in tables to allow for clearance and variations.

Special Milling

On small quantities where special openings are specified, an extra charge will be made to cover the cost of "setting up" machines. No extra charge will be made for this special work when quantities are sufficient to cover the cost.

A sample Nut or Screw, as gauge, should accompany orders.

Special Wrenches

made to order. Prices will be quoted upon receipt of models, or drawings and specifications stating kind of finish (see above description) and quantity required.

When Ordering

please use numbers and state whether requirements are for U. S. Standard, S. A. E. Standard, American Standard, Whitworth Standard, or m/m openings and condition of finish desired.

Finished Wrenches will be supplied, unless otherwise specified.

♦ REGISTERED TRADE MARK

✦ "SUPERIOR" ENGINEERS' WRENCHES
 (Carbon Steel)

15° Angle, Single Head
 For Standard Nuts and Cap Screws

Unfinished are milled, size stamped on head, hardened and shot-blasted.

Finished are milled, surface and edges smooth, size stamped on head, hardened and black enameled (baked on)—heads bright.

Wrenches of this style but with handle tapered will be furnished on orders for the larger sizes, beginning with No. 11.

Handles can be offset above heads at angles of 45° to 90° from opening, at an additional charge; see cut at right.

✦ "SUPERIOR" CHECK NUT, OR "THIN" WRENCHES
 (Carbon Steel)

15° Angle, Single Head

For Check, Jam, or Lock Nuts, etc.

This class of Wrench is guaranteed amply strong for its intended purpose, but is not designed for severe service.

For Whitworth Standard and Metric Measure, see page 160.

Unfinished are milled, size stamped on head, hardened and shot-blasted.

Finished are milled, surface and edges smooth, size stamped on head, hardened and black enameled (baked on)—heads bright.

♦ "SUPERIOR" HEX-BOX WRENCHES
 (Carbon Steel)

REGULAR PATTERN—15° ANGLE

Unhardened are broached and shot-blasted only.

Finished—see description on page 13.

Designed for use requiring an exceedingly strong tool and where head clearance is limited. Two Patterns—Regular for general work, Heavy for severe service. Wrenches larger than No. 810 Regular and No. H809 Heavy have tapered handle.

These Wrenches can also be furnished, to order, with 12-point openings.

For Whitworth Standard, see page 161.

Handle can be offset above head at angles of 45° to 90° from opening, at an additional charge; see illustration at right.

★ "SUPERIOR" CONSTRUCTION WRENCHES
 (Carbon Steel)

These Wrenches with deep opening provide substantial bearing on square nuts. The long handle is round for the greater part of its length, with tapered end for easy insertion into bolt holes when bringing them into line.

Hardened are milled, hardened all over, shot-blasted; heads not bright.

For Whitworth Standard, see page 160.

Handle can be offset above head at angles of 45° to 90° from opening, at an additional charge; see illustration at right.

♦“SUPERIOR” STRUCTURAL WRENCHES (Carbon Steel)

Straight Opening

The jaws of these Wrenches are narrow and long, providing substantially full bearing on square nuts. The long handle is round for the greater part of its length, with tapered end for easy insertion into bolt holes when bringing them into line.

The abrupt offset and angle of handle provide for clearance of obstructions, even when these are close to the head, and safety to the operator's hands. The wrench is particularly well balanced. When thrust into slit of scabbard or belt-loop the "step-up" of the round above the flat part of handle acts as a stop. It retains the wrench, yet allows its ready release.

For explanation of finish, see previous page. Whitworth Standard, see page 162.

"ALWAYS READY" WRENCHES

Their jaws grip! Round, square, hexagon—in fact, any and every shape that will fit between the tough, oil-tempered jaws of Williams' "Always Ready" Wrenches; their strong, sharp teeth bite instantly and hold with a slipless grip.

These Wrenches are drop-forged from a specially fine grade of steel and carefully tempered in oil—solid, dependable tools that are practically indestructible.

Packed; 6 in paper box.

ADJUSTABLE WRENCHES

(Carbon Steel)

DISPLAY CARD
 19-3/4 x 15"
 Free with purchase
 of Wrenches

Fully Guaranteed

These are positively the strongest Carbon Steel Wrenches of their type now made. Their considerably greater strength, as compared with others, is due to improved design and materials—no increase in size.

Square shoulders on the shank portion of the sliding jaw provide maximum and positive bearing against working stress. They eliminate entirely the wedging and spreading action, inevitable in wrenches having a cylindrical bearing at this point. The shoulders also permit a thicker "web" on the jaw, for added strength, without increasing the thickness of the wrench head. The net result is a sliding jaw that is unbreakable in wrench service.

Drop-forged from specially strong, tough steel and accurately heat-treated in electric furnaces for uniform, dependable strength. Supplied in two styles: Finished in natural polished steel; Semi-finished are shot-blasted, heads bright. Packed, individually, in attractive cardboard box.

REPLACEMENT PARTS ASSORTMENT

★ "SUPERJUSTABLE" WRENCHES (Chrome-Alloy)

DISPLAY CARD

19-3/4 x 15"

Free with purchase
of Wrenches

Fully Guaranteed

Williams' "Superjustable" Wrenches with thin, tapered jaws, are drop-forged from the finest grade of Chrome-Alloy Steel obtainable for the purpose. "Superjustables" are thinner and lighter, yet stronger and tougher than conventional carbon steel adjustable wrenches of similar capacity. They are second to no other alloy steel adjustable wrenches in appearance, strength and durability.

Square shoulders on the shank portion of the sliding jaw provide maximum and positive bearing against working stress. They eliminate entirely the wedging and spreading action, inevitable in wrenches having a cylindrical bearing at this point. The shoulders also permit a thicker "web" on the jaw, for added strength, without increasing the thickness of the wrench head. The net result is a sliding jaw with maximum resistance to breakage.

All parts are carefully machined to extremely close limits, assuring the accurate fit essential in wrenches of this class. Heat-treatment in recording electric furnaces of the latest type insures uniformity of product and tough, dependable strength.

Attractively finished in chrome-plate over nickel, with highly polished head; the handle is in "satin" finish. Packed, individually, in a distinctive cardboard box.

"NON-SPARKING" SAFETY WRENCHES

Drop-Forged, Beryllium-Copper

ENGINEERS' PATTERN—15° Angle

Hard
Tough
Strong
Non-Magnetic
Non-Corroding

Williams' "Non-Sparking" Wrenches are especially adapted for use in all industries where great fire hazards exist—paint, varnish, powder and chemical plants, coal mines, oil and gasoline refineries, etc. Indispensable wherever a spark may produce disastrous results.

Drop-forged from Beryllium-Copper and accurately heat-treated, Williams' "Non-Sparking" Wrenches are superior in strength, toughness and hardness to those made of any other known safety ("non-sparking") material. Practically as strong as steel wrenches of similar design and size. Furnished for Whitworth Standard and Metric sizes, if desired.

Finished in "Safety Green" enamel, heads polished bright; opening size stamped.

Additional sizes of Engineers' pattern and approximately 50 other standard patterns in a wide range of sizes, can be furnished in reasonable quantities; prices on application.

Fully Guaranteed

THE ★“SUPERRENCH” (Chrome-Molybdenum)

FOR many years, Wrenches, like other tools, were made of Carbon Steel, the best material then available. But, with the advent of the automobile, came the insistent demand for stronger, tougher materials that led to the development of Alloy Steels of various grades. Their use permits a refinement in design and a decrease in weight of parts, impossible of attainment in the case of Carbon Steel.

Taking advantage of our experience gained in making to order special forgings of many kinds of Alloy Steel and of our knowledge of wrench requirements and design, we introduced several years ago, a line that is the last word in these tools—THE “SUPERRENCH”.

After exhaustive tests, our special Chrome-Molybdenum Steel was selected as providing the strongest, toughest and most desirable material for the purpose ever produced. Practical experience in the hardest service has since demonstrated the correctness of this selection. Though of lighter weight, thinner section, greater length and with narrower jaws than Carbon Steel Wrenches with corresponding openings, The “Superrench” is absolutely dependable—no matter how small the size, or how hard the work.

Routine or extraordinary jobs “Superrenches” handle all. Their thin heads and pointed jaws get in and grip where no larger wrench *could* go. Where space is limited, a man needs a tool that’s a help—not a hindrance. And in any event, he wants a wrench on which he can pull his last ounce, if necessary, and know the tool will take all he can give it. That’s The “Superrench”.

Every “SUPERRENCH” is Fully Guaranteed

THE ★ "SUPERRENCH"

(Chrome-Molybdenum)

ENGINEERS' PATTERN

15° Angle, Double Head

Engineers' Pattern "SUPERRENCHES" are particularly serviceable in close, cramped quarters where clearance is limited. Their heads are thinner and their pointed jaws narrower than carbon steel wrenches with the same openings. Their generous length is ample for the hardest service.

Drop-forged from Chrome-Molybdenum steel and offered in 2 styles:—

Unfinished for industrial use—gray enameled all over; heads not bright.

Finished—chrome-plated; heads buffed bright.

For Whitworth Standard and Metric Measure, see page 162.

THE ★ "SUPERRENCH"
(Chrome-Molybdenum)
CONSTRUCTION PATTERN

15° Angle

These Wrenches have been made especially to meet the needs of structural workers. Their slim design provides ample strength and leverage without unnecessary weight and bulk.

The jaws are narrow and long, providing substantial bearing on square nuts.

The long handle is round for the greater part of its length, with tapered end for easy insertion into bolt holes when bringing them into line.

Furnished heat-treated and Cadmium-plated.

For Whitworth Standard, see page 162.

Handle can be offset above head at angles of 45° to 90° from opening, at an additional charge; see cut at right.

Every "SUPERRENCH" is Fully Guaranteed

THE ★ “SUPERRENCH”

(Chrome - Molybdenum)

STRUCTURAL PATTERN

Straight Opening

These Wrenches have been made especially to meet the needs of structural workers. Their slim design provides ample strength and leverage without unnecessary weight and bulk.

The jaws are narrow and long, providing substantially full bearing on square nuts. The long handle is round for the greater part of its length, with tapered end for easy insertion into bolt holes when bringing them into line.

The abrupt offset and angle of handle provide for clearance of obstructions, even when these are close to the head-end, and safety to the operator's hands. The wrench is particularly well balanced. When thrust into slit of scabbard or belt-loop, the "step-up" of the round above the flat part of handle acts as a stop. It retains the wrench, yet provides for ready release.

Furnished heat-treated and Cadmium-plated.

For Whitworth Standard, see page 162.

Every “SUPERRENCH” is Fully Guaranteed

THE ★ "SUPERRENCH" (Chrome-Molybdenum)

HEX-BOX REGULAR PATTERN—7 1/2° ANGLE

For Close Quarters

These "Superrenches", with thin head walls, are particularly efficient in close quarters. Their 12-point openings grip hex nuts on all sides, preventing slipping and rounding of the nut's corners. Rotate hex nuts where the swing of the wrench is limited to only 15°—*half* the space required by the conventional wrench.

Drop-forged from Chrome-Molybdenum steel, heat-treated and offered in 2 styles:—

Unfinished for industrial use—gray enameled all over; heads not bright.

Finished—Chrome-plated; faces of heads buffed bright. Supplied until stock is exhausted; thereafter to order.

† At extra charge, No. 1815A is also furnished with "striking-face" on end of handle, as illustrated at right; length 14 inches.

THE "SUPERRENCH" (Chrome-Molybdenum)

DUOHEX-BOX PATTERN—SINGLE OFFSET

Same Opening in Both Heads

Extra Reach
Short Swing
No Slip

SET No. 8105
LIST PRICE, Complete \$7.30
In Cardboard Box
5 "Superrenches", listed below

DUOHEX-BOX "Superrenches" are particularly well adapted to work in close quarters. Thin head walls permit use where clearance is extremely limited. The openings grip hex nuts on six sides, preventing all slipping and rounding of the nut's corners. Extra length provides unusual reach and leverage. Mechanics appreciate these features, as well as the unusual strength of the wrenches.

Each head has a 12-point opening. Consequently, hex nuts can be completely rotated by the offset head where the swing of the wrench is limited to 30°—less than 1/10 of a full turn. The straight head requires a swing of only 15°.

Ideal for use in awkward places and on Connecting Rods, Main Bearings, Base, Cylinder Heads and Spring Clips.

GENUINE "Superrenches", forged from Chrome-Molybdenum steel, heat-treated and chrome-plated.

Every "SUPERRENCH" is Fully Guaranteed

THE "SUPERRENCH"

(Chrome-Molybdenum)

DUOHEX-BOX PATTERN—LONG AND SHORT

15° Angle Offset

Every "SUPERRENCH" is Fully Guaranteed

Particularly well adapted to work in close quarters. Thin head walls permit use where clearance is extremely limited. Hex nuts are gripped on six sides, preventing all slipping and rounding of their corners. Extra length provides unusual reach and leverage.

The 12-point openings rotate hex nuts where the swing of the wrench is limited to 30°.

Drop-forged, Chrome-Molybdenum steel, accurately heat-treated and chrome-plated.

THE "SUPERRENCH" (Chrome-Molybdenum)

ADJUSTABLE HOOK SPANNERS

SET No. 1400
PRICE, Complete—\$12.10
 In Leatherette Roll
 1 Each, Nos. 1471, 1472, 1474

Three sizes of Spanners offer an unusual combination of strength and ready adjustment, fitting all rounds from $\frac{3}{4}$ to $4\frac{3}{4}$ " diameter.

Drop-forged from Chrome-Molybdenum steel, heat-treated and chrome-plated, face of jaw and raised part of handle buffed bright.

Sold individually, or in Set No. 1400 which covers a wide field of usefulness. It is especially serviceable on spindle bearings of lathes, milling machines and grinding machines. Also, for adjusting collars and slotted rings used on many types of automatic machines.

No.	Capacity for Circles, Diameter	Extreme Length, Approx.	Thickness		Depth Hook	PRICE	No.
			Handle	Hook		Chrome-Plated

MIDGET "SUPERPLIER" No. 1519 (Chrome-Alloy)

LIST PRICE, Each \$ 1.85

Drop-forged from special Chrome-Alloy steel and heat-treated. The bolt affords the greatest strength and rigidity possible in thin slip-joint construction.

This midget size tool (length $4\frac{1}{2}$ "—weight 1 oz.), is especially designed for use in connection with distributors, ignition systems, wiring, panels, switch-boards, radios, carburetors, clocks, etc. and the innumerable jobs requiring small pliers with thin, slim jaws.

The 4-position slip-joint provides openings from 0 to $\frac{9}{16}$ ", with the jaws paralleled at the most important openings. The slightly flared ends of the handles give ideal finger control. Cadmium-plated.

MIDGET ♦ "SUPERRENCHES" (Chrome-Molybdenum—Chrome-Plated)

ELECTRICAL SET No. 1139P

LIST PRICE

Complete in Leatherette Roll

Set 1139P—with "Superplier" No. 1519..\$8.65

Set 1139—without "Superplier"..... 6.80

Set No. 1139P will be furnished,
unless otherwise specified.

An assortment of 9 Midget "Superrenches" and "Superpliers" 1519, for those troublesome little jobs requiring small tools that are a *help*—not a hindrance.

Midget "Superrenches" are extremely light and thin, yet amazingly strong. Both openings in each wrench are the same size, *but at different angles* (15° and 75°)—*where one head can not operate, the other will*. On magnetos, timers, generators, wiring-connections, carburetors, radios—all delicate adjustments, or in the closest quarters, this Set is invaluable. The wrenches are sold individually, also; see table below.

Midget "Superplier" No. 1519 fully described on page 64.

ELECTRICAL SET No. 1148P

LIST PRICE, \$5.15

Complete in Leatherette Roll

A compact, handy assortment of four mid-get size wrenches and one plier at very moderate price. All are especially designed for use in connection with distributors, ignition systems, wiring, panels and switchboards, radios, carburetors and the innumerable jobs requiring small tools with thin, tapered jaws.

Midget "Superrenches" are unusually thin and slim, but surprisingly tough and strong. Each has two different openings at 15° angle; see table at right.

Midget "Superplier" No. 1519 fully described on page 64.

JUNE 1937

THE ★ "SUPERRENCH"
 (Chrome-Molybdenum)

OPEN-BOX PATTERN—SINGLE HEAD
 WITH 12-POINT OPENING

Every "SUPERRENCH" is Fully Guaranteed

These efficient Wrenches provide all the advantages of the popular 12-point box design, plus those of the open-end type. Their open box allows the wrench opening to straddle pipes, tubes, shafts, etc., and to adjust nuts and fittings thereon. Especially handy on flared-nuts in refrigeration work and very useful in general industrial service.

With the 12-point (double hex) openings, the nut can be completely rotated where the swing of the wrench is limited to 30°. Their gripping power is more than double that of ordinary wrenches—cannot slip in operation. Thin heads and narrow jaws permit easy operation in close quarters.

GENUINE "Superrenches", forged from Chrome-Molybdenum steel, heated-treated and chrome-plated, with polished heads.

"MULTISOCKET" WRENCH No. 1999
(Cadmium-plated)**EIGHT IN ONE****LIST PRICE—\$4.00 Each****EIGHT DIFFERENT, 12-POINT OPENINGS:—****Small Head**

7/16, 1/2, 9/16, 19/32"

Large Head

5/8, 11/16, 3/4, 7/8"

Length 9"—Weight 1-1/8 lbs.

Williams' "Multisocket" Wrench is virtually an entire wrench kit in only one tool. Its ingenious design makes it almost indispensable to every mechanic.

The openings grip hex nuts on six sides preventing all slipping and rounding of the nuts' corners.

Swivel heads, with index spring to retain working opening in position for use, permit handle to be operated at practically any angle desired. Can be used as a socket wrench.

The entire wrench is drop-forged, heat-treated and finished in cadmium-plate.

**DISPLAY CARD**

12-1/2 x 14-3/4"

With Easel Back

Free with Purchase of Wrenches

This colorful "Silent Salesman" was designed especially to make a distinctive appearance on the counter. In brilliant orange, black and gold, it makes a splendid background for the six "Multisocket" Wrenches it displays. Free with purchase of wrenches.

Fully Guaranteed

THE "SUPERECTOR" REVERSIBLE RATCHET WRENCH

With Quadruple Pawls and Drop-Forged Handle

Fully Guaranteed

"Superector" Ratchet Wrenches are built for rapid operation in the most severe service such as bridge, structural and other work requiring fast, dependable and rugged tools. They are instantly reversible in action. Three sizes of mechanism—E1, E2, E3—in five long, slim but powerful handles provide ample leverage for the hardest jobs.

Only WILLIAMS' "SUPERECTOR" offers all the following advantages:—

QUADRUPLE PAWLS. Instead of the usual single pawl, engaging one gear tooth, The "Superector" provides increased strength by the constant engagement of 2 pawls with 2 teeth. Pawls are of hardened tool steel and provide the sturdiest construction possible.

HANDLE is **drop-forged**—not cast; utilizes the extra strength afforded by pawls.

GEAR TEETH. The "Superector" is the only line of wrenches of this type with 20 teeth in all socket gears, instead of the usual 16 teeth. Consequently, all wrenches will rotate nuts with only an 18° swing of the wrench as against 22 1/2°.

SHIFTER when in neutral, completely disengages all pawls for easy insertion and removal of the Socket. A flip of the lever reverses the wrench action.

COLLAR for retaining Socket is easily assembled with latter since it is provided with means to align instantly with socket-retaining screws.

CAP, securely seated in the wrench head, fully encloses the mechanism.

Wrenches and Sockets are finished in light metallic gray enamel.

EXTRA "SUPERECTOR" PARTS

Always specify whether Part is
for Wrench No. E1, E2, or E3

THE ★ "SUPERECTOR" REVERSIBLE RATCHET WRENCH

With Quadruple Pawls and Drop-Forged Handle

Hex Sockets

Sockets have hole extending clear through their center so that nuts may be turned on any length of bolt. They are in three groups—E1, E2 and E3—to fit corresponding wrench handles, as shown in table below. Sockets in one group are not interchangeable with those in another group. All are heat-treated.

For Whitworth Standard, see page 161.

♦ “SUPERSOCKET” WRENCHES

Detachable Socket Wrenches possess certain inherent advantages that make them almost indispensable to industrial users. Williams’ new line of “Supersocket” Wrenches, therefore, will be of interest to every mechanic and to all machine shops and industrial plants, large and small, because:—

They offer a wide selection in the combination of regular parts to make the complete wrench, which can be easily and quickly “built up” to suit the individual job. No other wrench system even approaches Detachable Socket Wrenches in this respect.

Since the form of the complete wrench can be readily changed to adapt it to a great variety of needs, quickness, ease and economy in operation on each job are assured. Williams’ line provides for unusual speed in such changes.

Extra strength is provided in Williams’ “Supersockets” by the use of Special Alloy steel.

For work in close corners they are unequalled. Socket walls are thin; consequently they operate in corners and cramped quarters where other tools are often useless.

Williams’ “Supersocket” Line offers complete equipment for almost every conceivable variety of service. Five separate and distinct patterns of Sockets, with a full assortment of Handles and Parts for each, cover practically all industrial needs:—

MIDGET Electrical— $9/32''$ Square Drive. Slim, Straight Wall Sockets for all delicate adjustments. Openings, $3/16''$ to $7/16''$ —4, 6, 8 and 12-points.

BANTAM— $3/8''$ Square Drive. Light, but strong Straight Wall Sockets with thin walls for use in close quarters. 12-point openings, $1/4''$ to $3/4''$.

STANDARD— $1/2''$ Square Drive, includes Sockets with 12-point and Square openings up to $1-1/4''$ for general service.

HEAVY DUTY— $3/4''$ Square Drive. Sockets have 12-point openings $7/8''$ to $2-1/4''$. Made for harder service than the ordinary run of work.

EXTRA HEAVY DUTY, with $1''$ Hex Drive and Sockets with 12-point openings $1-1/16''$ to $2-3/4''$, is especially designed for the toughest sort of service. Its rugged strength is ample for the hardest jobs.

♦ “SUPERSOCKET” NUMBERING SYSTEM

The system of numbering Sockets and Parts in the “Supersocket” Wrench line is unique. Developed by J. H. Williams & Co., as a convenience to the trade, the system has proved so simple in application that it has met general approval. Description follows:—

(Continued on next page)

★ “SUPERSOCKET” WRENCHES

(Continued)

The five Patterns of “Supersockets” are called—

“Midget”	“Bantam”	“Standard”	“Heavy Duty”	“Extra Heavy Duty”
----------	----------	------------	--------------	-----------------------

The symbol for each pattern is:

M	B	S	H	X
---	---	---	---	---

The drive for each pattern is:

9/32" Sgre.	3/8" Sgre.	1/2" Square	3/4" Square	1" Hex
-------------	------------	-------------	-------------	--------

SOCKET NUMBERS

1. Prefix letter in the piece number indicates the Pattern and hence the size of drive. Thus, No. S-1214 indicates Standard Pattern, 1/2" square drive.

2. The first figure, or the first two figures in the piece number indicate the number of “points” in the opening of the “Supersocket”—i.e., 4, 6, 8 or 12 points. Thus, No. S-1214 indicates Standard Pattern, 1/2" square drive, 12-point opening. Similarly No. S-414 indicates a 4-point (square) opening of same size.

3. The last two figures in the piece number indicate the nominal socket opening in 32nds of an inch. Thus, No. S-1214 indicates Standard Pattern, 1/2" square drive, 12-point 14/32, or 7/16" opening.

4. Variations: Standard Pattern Sockets are Taper Nose, or Straight Wall in style. The prefix ST indicates Straight Wall. Similarly, SD as prefixed to the piece number means Extra Deep Standard sockets.

HANDLES and PARTS NUMBERS

1. Prefix letter in the piece number indicates pattern and hence size of drive, similarly to Sockets, above.

2. Figures indicate the particular Part. The same figures are used in *all* other Patterns of the same style Part. For instance:—

	Midget	Bantam	Standard	Heavy Duty	Extra Heavy Duty
Sliding T Handle	M-20A	B-20A	S-20C	H-20A	X-20B

3. The suffix letter denotes some variation in form. The “C” in No. S-20C, for instance, indicates the handle is offset, *not* straight, as are M-20A, B-20A, etc.

SETS. For the convenience of users, careful selections of popular size Sockets are combined with the Handles and Parts, necessary for desirable Socket Wrench combinations, and assembled in Sets as described herein. They supply maximum service in a minimum number of tools and, hence, are convenient, efficient and economical.

Williams’ “Supersocket” Wrenches are strong, dependable tools in which Williams’ high standard of quality has been maintained throughout. All Sockets, Handles and Parts are finished in chrome-plate over nickel. All are

SOCKETS

Williams' Midget "Supersockets" are unequalled in cramped quarters and for delicate adjustments. Invaluable time-savers on Magnetos, Timers, Generators, Carburetors, Radios, Refrigerators, etc.

Their thin, straight walls enable them to operate readily on troublesome little jobs where no ordinary socket or wrench could even get in and grip the nut.

With
4, 6, 8
& 12-Point
Openings

Accurately made from a superior grade of Chrome-Alloy steel and heat-treated in electric furnaces. Uniformity of product and dependable strength are assured.

12-Point
Opening

SOCKETS

Williams' Bantam "Supersockets" with thin, straight walls get in and work in close quarters. Their 12-point openings rotate nuts completely where the handle can be swung only 30°. Very useful in refrigeration service.

Made from a superior grade of high tensile steel—Chrome-Alloy—and heat-treated in electric furnaces for maximum toughness and strength.

All Sockets packed 6 in a box.

REVERSIBLE “SUPERRATCHET” No. B-51

Williams' Bantam "Superratchets" are truly and instantly reversible. Just snap the shift-lever to ON, or OFF. A flip of the thumb does it.

"Superratchets" are stronger, easier to handle, more efficient. Bantam B-51, 6-1/2" long, can be used to advantage with ANY detachable socket, or part having 3/8" square drive opening.

Simple, rugged design—no delicate springs or fragile construction. Every part made of alloy and high-tensile steel, accurately machined and scientifically heat-treated.

For extra strength and longer life, the Ratchet-gear has **DOUBLE-TOOTH** engagement with the Dog. Also 24 teeth against the usual 14, or 16 teeth in other geared ratchets; operates in one-third less space.

Bantam is listed on opposite page.

Standard "Superratchet" S-51, 1/2" sq. drive, page 79.

(Chrome-plated over Nickel)

HEAVY DUTY PATTERN

3/4" SQUARE DRIVE

With
12-Point
Opening

SOCKETS

Williams' Heavy Duty Sockets are designed for harder service where more strength is required than on the everyday job. They provide ample strength without clumsy bulk. Will rotate nuts completely where the handle can be swung only 30°.

Made from superior high tensile Alloy Steel and heat-treated in electric furnaces.

Packed 2 in a box.

To use Heavy Duty Sockets (3/4" square female drive) with Standard Handles and Parts (1/2" square male drive), use Adapter SH-130, pages 79 and 87.

HEAVY DUTY PATTERN

3/4" SQUARE DRIVE

SET No. A-50

LIST PRICE, Complete—\$48.54

15 Pieces

10 Sockets and 5 Accessories

In Strong Steel Case, 19-3/4 x 5-1/4 x 2-3/4"

Total Weight, 25 1/4 lbs.

Williams' Set A-50 for Heavy Duty contains Sockets and Accessories of trim design, yet of ample strength for hard jobs.

Ten Sockets with 12-point openings from 1-1/16 to 1-3/4", care for all U. S. Std. Nuts 5/8 to 1"; Hex Cap Screws 7/8 to 1-1/8"; all S. A. E. Std. Nuts 3/4 to 1-1/8"; all Amer. Std. Regular and Jam Nuts 3/4 to 1"; Light and Castle Nuts 3/4 to 1-1/8".

The Handles and Parts are easily connected with the Sockets (and as readily disconnected), but are held firmly against unintentional displacement.

EXTRA HEAVY DUTY PATTERN

1" HEX DRIVE

With
12-Point
Opening

SOCKETS

Williams' Extra Heavy Duty Sockets provide sturdy, rugged strength for the hardest service. In addition to the 1" hex drive opening in their base, they are cross-drilled to receive the Sliding Handle which is thus brought close to the work. This minimizes the tendency to tip when the socket is used near end of handle. Will rotate nuts completely where handle can be swung only 30°.

Made from superior high tensile steel, heat-treated in electric furnaces for maximum strength.

Nos. X-1234 to X-1248 packed 2 in a box. All others, 1 in a box.

SUPER WRENCH-CHEST No. 1001*"The Complete Tool Room"***LIST PRICE, Complete—\$154.60****85 Pieces—45 Sockets, 40 Handles and Wrenches****In Strong Steel Case, 23 x 10-1/4 x 10". Total Weight, 69 lbs.**

Williams' Super Wrench-Chest provides a complete assortment of wrenches in numerous patterns and sizes for machinists and mechanics—it's a miniature tool room in itself. Every opening required, from 3/16", for delicate adjustments and fussy jobs, up to 1-5/8" for heavy work, requiring tools of rugged strength.

The assortment is fully listed, with complete details as to sizes, etc., on opposite page. All tools are heat-treated and finished in chrome-plate, excepting "Superpliers".

The case and tray are of extra heavy metal, thoroughly reinforced at the corners. Continuous, full length "piano" hinges on both cover and "front door". The latter is deep and wide, providing complete accessibility to the bottom compartment. Individual tools can be readily located. The Chest is built to last a lifetime and is of ample size to accommodate additional tools.

The case is equipped with four ball casters, fitted with ball bearings, and can be easily rolled on bench or floor. It can also be carried comfortably, without disarranging the tools, by means of the strong metal "tote" handle on the top. A strong pad-lock with individual, duplicate keys is furnished.

DISPLAY STAND

FOR

✦ "SUPERSOCKET" WRENCH SETS

*Every "SUPERSOCKET" and Accessory is
Fully Guaranteed*

This compact stand 30" wide and 60" high, provides a most attractive and convenient means of displaying the most popular Williams' "Supersocket" Sets.

A convenient rack for holding literature describing them is provided on the back of the panel at the top.

The stand, mounted on casters, is made entirely of metal, enameled in orange. The panel at the top is lettered in black and gold. The rich orange of the stand makes a pleasing contrast to the dark gray of the boxes with their labels in gold, black and orange.

This display is a real "Silent Salesman"—dealers find it a very efficient aid. It is loaned only for the display of Williams' "Supersocket" Sets.

PRICE, Complete \$31.00

Stand—Vise—Pipe Bender

Fully Guaranteed

Folded for
carrying—
Weight
35 lbs.

Williams' "Vulcan" Vise Stand combines all the advantages of the Chain Pipe Vise with a firm and rigid, yet easily portable stand. It is a most efficient tool for all pipe, 1/8 to 2 inches, at very moderate price.

Base (high grade malleable iron) is heavily reinforced under the aprons to prevent distortion in severe service. In addition to "V" pipe support in rear, recess for oil can and slots for handy arrangement of tools are provided.

Pipe Bender handles pipe up to 3/4 inch.

Legs are 1" pipe, with upset feet, punched for fastening to floor, if desired. Even without such fastening, they provide firm, stable support. For easy carrying, the legs fold and may be tied together by a permanently attached chain (see illustration).

Jaw—tool steel, carefully hardened and tempered—grips along its entire length. No bending of the smaller sizes of pipe.

Chain, Nut and Handle are of tough wrought steel. All three are the same as and are interchangeable with those supplied with Williams' "Vulcan" Vise No. 1—the original Chain Pipe Vise and the favorite for over 40 years.

All parts of Vise Stand are interchangeable.

✦ “VULCAN SUPERIOR”
 DROP-FORGED CHAIN PIPE VISE

METAL DISPLAY STAND

Supplied with short length of pipe and bolts and nuts for attaching vise No. 11. Space in base for circulars. Stand finished in bright orange. One in a carton; weight 6 3/4 lbs. Free to Dealers.

Points of Superiority

“Overhead” Adjustment—the handle is **on top** for easy operation.

Reversible Jaws—when the teeth first in use wear, simply remove the screws and turn the jaws over—double life.

Larger Capacity—each vise takes pipe 1/2" larger than other chain vises of similar size.

The “Vulcan Superior” Vise provides all the reliability of Williams’ old “Vulcan”—the ORIGINAL Chain Pipe Vise and the favorite for more than 30 years—together with the convenience of “overhead” adjustment. **Reversible** jaws, too, for longer life.

Wholly made from tough wrought steel—no castings are tolerated. **Drop-Forged** base, jaws, handle and chain-arm. The chains are of the same unsurpassed quality as those of the widely established “Vulcan” Chain Pipe Tongs. Unbreakable, rapid in action, positive in grip. Fully guaranteed.

Supplied in 2 styles of finish—see table. Packed one in a box.

Chrome-plated will be furnished, unless otherwise specified

GENUINE ♦ “VULCAN”

THE ORIGINAL

DROP-FORGED CHAIN PIPE VISE

For Holding Pipe, Bolts, Bars, Shafts, etc., from 1/8 to 8 inches in Diameter

Standard Finish—
jaws have bright
face around panel.

METAL

DISPLAY STAND

Supplied with short length of pipe and bolts and nuts for attaching vise No. 1. Space in base for circulars. Stand finished in bright orange. One in a carton; weight 4 lbs. Free to Dealers.

These Vises are unbreakable, light, compact, rapid in action and positive in gripping pipe. All are readily fastened to bench or post. The smaller sizes are well adapted for carrying by hand or in tool bag.

Adjustment is quickly effected by engaging the projecting rivets of the chain with a series of stepped bosses on the base, when the vise may be instantly locked in an unbreakable grip by a turn of the handle.

They are made entirely of wrought steel; the drop-forged jaws are of saw-tempered steel for file-sharpening. The chains are of same quality as those of our “Vulcan” Chain Pipe Tongs; all parts are fully guaranteed and replacements carried in stock.

All Vises are packed in individual boxes for convenient shelving. Six of Nos. 1 and 2 boxes to a carton.

Orders for Chains take Screw also, unless otherwise specified.

FLAT LINK CHAINS

FOR ALL WILLIAMS' "VULCAN" CHAIN PIPE TONGS

TWO TYPES

1. REGULAR

Plain links without any markings as illustrated at right. Natural, tumbled steel finish.

2. "SUPERCHAIN" ♦

Identified by the markings stamped on each link, as illustrated at left. Finished completely in cadmium-plate.

There are two different types of Flat Link Chains for Williams' Tongs—REGULAR and "SUPERCHAIN".

1. **Regular Chains** are made of special high tensile carbon steel and each is proof-tested as described below. Regular chains are interchangeable, size for size, on the following Tongs with which they are furnished as original equipment: "Vulcan", "Improved Vulcan", "Vulcan Superior" and "Vulcan Boll-Weevil". Regular Chains should *not* be used with "Supertongs", or with the "Boll-Weevil Zephyr".

2. **"Superchains"** (Flat Link type only) are made from Alloy Steel, heat-treated and cadmium-plated. Each "Superchain" is proof-tested as described below. Double-end replacement "Superchains" are interchangeable, size for size, on all Williams' Tongs with the one exception of "Boll-Weevil Zephyr". Due to extra length of "Zephyr" Superchain these chains are *not* interchangeable with any other pattern of tongs. They must be ordered specifically by number for exact "Zephyr" size desired.

Proof-Testing. Each Chain, regardless of type, is individually "proof-tested" on a standard tension machine *to two-thirds of its breaking strain*. Every chain so tested is stamped ○ on the drop-forged swinging-link and to it is attached a leaden seal, bearing our trademark ◇W. Every Flat Link Chain leaving our works *must* bear this mark and seal—the Proof of Quality—as evidence that it has passed our standardized proof-tests.

♦ REGISTERED TRADE MARK

“VULCAN SUPERIOR”⁺

DROP-FORGED PIPE-AND-FITTINGS TONGS

For Both Pipe and Fittings, 1/8 to 12 in.

- In no other tongs on the market can all these desirable “Vulcan Superior” features be obtained:—
- Universal Service**—Two tools in one. Always ready “as is” for either pipe or fittings. Two tools as commonly used (one for pipe, one for fittings) are unnecessary.
 - “V” Recess** in the jaws, combined with their general design, gives “Vulcan Superior” a greater number of grips or “bites”, both on pipe and fittings, than ordinary tongs. One-spot wear on the teeth is prevented and easier operation provided. Increased strength and greater ease in handling results.
 - Reversible** pipe-and-fittings jaws. When the teeth first in use wear, simply unscrew the bolt and turn the jaws end-for-end.
 - Chains****—Either Flat Link Chain, or Cable Chain, as desired.
 - Proof-Testing.** Each Chain is individually “*proof-tested*” on a standard tension machine *to two-thirds of its breaking strain*. Every chain so tested is stamped **○** on the drop-forged swinging-link and to it is attached a leaden seal, bearing our trade mark **◊W**. Every Flat Link Chain leaving our works must bear this mark and seal—the Proof of Quality—as evidence that it has passed our standardized proof-tests.
- Wholly made from tough wrought steel; all parts are interchangeable.

GENUINE "VULCAN" ✦
 DROP-FORGED CHAIN PIPE TONGS

For Turning, or Holding 1/8 to 18 in. Pipe

With Flat Link Chain

With Cable Chain

The Original "Vulcan", introduced by Williams forty years ago, is still the oil-fields' favorite tongs for general work. All "Vulcans" are made entirely from tough wrought steel and are fully guaranteed.

Chains** swing from the center and can be used on either side of the jaws, thus reducing to the minimum, wear upon specific teeth.

Proof-testing. To insure proper service, each Flat Link Chain is "proof-tested" in a standard tension machine to *two-thirds of its breaking strain* listed in table. Each Chain, so tested, is stamped **W** on the drop-forged swinging link and to it is attached a leaden seal bearing our trademark **W** thus absolutely establishing the safety-factor and reliability of every tong.

The jaws are fastened to the handle by extra size through Bolt and U. S. Standard Nut.

THE "VULCAN SUPERTONG" ♦
DROP-FORGED ALLOY AND HIGH-TENSILE STEEL
HEAT-TREATED

For Turning, or Holding 1/8 to 18 in. Pipe

Equipped with Alloy "Superchain" **

"Supertongs" are a recent addition to Williams' line of Chain Pipe Tongs.

Design and structural features are identical with those of "Vulcan Tongs" described on the opposite page. "Supertongs", however, are forged from Alloy and High-tensile steel, and are heat-treated. They provide at least 50% *greater strength* than regular "Vulcan" Tongs of corresponding size, with no increase in bulk or weight.

"Supertongs" are equipped with "Vulcan Superchains", a new Williams' chain of Alloy Steel—heat-treated and cadmium-plated—having greatly increased strength and durability; see page 100. Each "Superchain" is individually "*proof-tested*" in a standard tension machine to *two-thirds of its breaking strain* listed in table. Each chain, so tested, is stamped **○** on the drop-forged swinging link and to it is attached a leaden seal bearing our trade mark **W**, thus absolutely establishing the safety-factor and reliability of every tong.

Finish:—Gray enamel; blue panel in Jaw, with bright faced edges. The "Superchains" are cadmium-plated.

IMPROVED "VULCAN" ✦
 DROP-FORGED CHAIN PIPE TONGS

WITH DOUBLE-ENDED REVERSIBLE JAWS

For Turning, or Holding 1/8 to 12 in. Pipe

With Flat Link Chain Only

Improved "Vulcan" Tongs are similar in design to the original "Vulcan" except that Jaws are double-ended, and are reversible. When teeth first in use wear, Jaws may be quickly reversed, end-for-end, thus providing double service life.

Jaws are fastened to the handle with two unusually tough steel studs. The Tongs are wholly made of wrought steel and are fully guaranteed.

Each Chain** is proof-tested and *certified*, as follows:—

Proof-testing. To insure proper service, each Flat Link Chain is "*proof-tested*" in a standard tension machine to *two-thirds of its breaking strain* listed in table. Each Chain, so tested, is stamped ○ on the drop-forged swinging link and to it is attached a leaden seal bearing our trade mark , thus absolutely establishing the safety-factor and reliability of every tong.

“VULCAN BOLL-WEEVIL” ♦
DROP-FORGED CHAIN PIPE TONGS
 For Oil Fields Service

Designed primarily to make flat pipe work and pipe line work easier; exceptionally efficient in trenches. No holding up of heavy tongs against the pipe from below. Quick, positive grip, but ready release.

To operate, simply lay tongs on top of pipe and hook chain around it.

For “Making-Up”, slide tongs forward so that rear end of jaws engages pipe (see dark pipe in illustration) and push handle down.

For “Breaking-Out”, pull tongs back to engage forward teeth with pipe (see phantom pipe in illustration) and pull up on handle.

Jaws are reversible for double life. Each Chain** is “proof-tested” and certified. Four Tong sizes listed below under “Boll-Weevil”.

“BOLL-WEEVIL ZEPHYR” ♦
 LIGHT WEIGHT—HEAT-TREATED
 Equipped with Alloy “Superchain”**

Exactly the same design, structural and utility features as the regular “Vulcan Boll-Weevil” described above, but stronger and lighter in weight, capacity for capacity. Forged from special high-tensile steel, heat-treated. Equipped with “Superchains”,** all individually “proof-tested” and certified.

Finish:—Handle and panel in Jaws—gray enamel; Jaws—bright faced edges, blue backs; Chains—cadmium-plated.

✦ "AGRIPPA"

DROP-FORGED TOOL-HOLDERS

"THE HOLDERS THAT HOLD"

No solid, forged tool for lathe, planer, shaper etc., can compare in convenience, efficiency and economy with properly designed and manufactured Tool Holders. They save practically all waste of costly High Speed Steel, eliminate all dead stock of heavy forged tools, do away with all blacksmith labor, most of the grinding and reduce loss in time of men and machines waiting for tools substantially to zero.

Williams' "Agrippa" System combines all the merits of the various makes of Tool Holders with additional advantages of their own:—

Holders, or shanks, all drop-forged from a strong, tough grade of carefully selected steel, are specially heat-treated and hardened. These processes develop maximum resistance to all wear and also the sturdy strength necessary to overcome the pushing thrust imposed upon the Cutters. The nose of the Holders is chamfered to permit convenient use in cramped quarters, where space is limited.

Cutter-holding channel is unusually accurate and long. It provides an absolutely true and rigid seat for the Cutter and assures a chatter-proof tool. No breaking of costly high speed steel bits.

"*Agrippa*" *Cutting-Off & Side-Tools* provide unequalled convenience and economy—one Holder takes *both* styles of blade.

Each "Agrippa" Boring-Tool holds securely many sizes of Bars, without requiring sleeves, or bushings. This is often a great convenience, since any size bar, within the capacity of the holder, can be inserted instantly without waiting to locate loose parts that have been lost, or mislaid.

(Continued on following page)

★“AGRIPPA”

DROP-FORGED TOOL-HOLDERS

“THE HOLDERS THAT HOLD”

(Continued)

“*Agrippa*” *Planing-Tools*, because of their unique design, provide 24 different angles of cutter adjustment instead of the usual 5—a real advantage when working in close quarters. Reversal of the Holder in the tool post, so as to bring the cutting point behind the center of the shank, makes a most efficient “goose neck” tool.

“*Agrippa*” *Cam-fastening*, supplied with Cutting-Off & Side-Tools, Threading-Tools Nos. S-50 to S-52 and Drop-Head Turning Tools, is furnished from hardened and tempered tool steel in either Hex Head, or Headless form of cam. This simple and most efficient device is indestructible and provides a particularly dependable cutter-fastening.

HEX HEAD

HEADLESS

“*Agrippa*” *Cutters* are all made from High Speed Steel. Since those for Turning and Planing Tools are cut to the “diamond-point” form or bevel, they care for the most common requirements with a minimum of grinding. All Cutting-Off, Side and Threading Cutters are finished, ready for use.

Hardening Cutters. Only the most modern and efficient equipment is used in hardening “*Agrippa*” Cutters. The furnaces are electrically heated, with atmosphere, temperature and time all under absolute and accurate control. Variations in hardness, beyond our standardized close limits, are entirely eliminated and consistent high quality, with durable cutting edges, maintained.

***All Williams’ “Agrippa” Tool Holders
are Fully Guaranteed***

TURNING-TOOL HOLDERS

With Right and Left Hand Offset Shanks

“THE HOLDERS THAT HOLD”

Furnished with Cutter and Finished Wrench

For general description see page 108.

(Continued from previous page)

The Set Screws, made of a fine grade of Alloy Steel, are accurately machined and carefully heat-treated and hardened. They are unusually tough and strong and provide the maximum efficiency in cutter fastening.

The “diamond-point” form in which the High Speed Cutters are furnished requires the minimum of grinding.

DROP-HEAD TURNING-TOOL HOLDERS

With Straight Shank

“THE HOLDERS THAT HOLD”

Furnished with either type of Cam, Cutter and Finished Wrench

For general description, see page 108.

Designed for use on lathes with clamp-tool rests and low centers, and excellently adapted to shaper and planer work.

The cutter-holding channel is unusually accurate. It provides an absolutely true and rigid seat for the cutter and assures a chatter-proof tool. No breaking of high speed steel bits.

The Cam-fastening is always rapid and positive—the greater the pressure the tighter

(Continued on following page)

Hex Head Cam will be furnished, unless otherwise specified.

 BORING-TOOL HOLDERS
 EACH TAKES MANY SIZES OF BARS
 "THE HOLDERS THAT HOLD"

Sleeve Bar

Plain Bar

Furnished with either Sleeve or Plain Bar, 1 each 45° and 90° Cutter and 2 Finished Wrenches

For General Description, see page 108.

With this Holder, encumbering sleeves or bushings are unnecessary for Bars of various sizes; *One* Holder takes *many* Bars. Commercial forms of bar steel are adaptable for either Bars or Cutters without machining.

The Sleeve-bar fastening provides for the rapid adjustment of either straight or angular Cutters without the use of extra parts; it has greater strength than others of the same general design.

The Plain Bar provides for use with either Straight or Angular Cutters in the simplest manner possible and is furnished with Headless Set Screws.

Standard size Sleeve Bar will be furnished, unless otherwise specified.

 LIGHT BORING-TOOL HOLDERS

FOR SMALL, LIGHT BORING, TURNING, ETC.

Each Holder Takes Several Sizes of Bars

"THE HOLDERS THAT HOLD"

Furnished with 2 Finished Bars, 1 Square Cutter
 and Finished Wrench

This Holder is very handy and economical for tool room use and for all small work—not only in boring small diameters, threading, etc., but also in turning.

Boring. Each tool will hold a number of sizes of Bars; two, varying 1/8" in diameter, are supplied with each Holder. The Bars are High Speed steel, carefully hardened and ground, ready for use.

Turning. The Holder, with offset shank, is reversible for right and left hand work. A hardened, High Speed Steel square Cutter with ends beveled to a "diamond point" for easy grinding to desired form, is supplied with each tool.

ADJUSTABLE BORING-TOOL POSTS

FOR MANY SIZES OF BARS

Patented in U. S. A.

Furnished with either Sleeve or Plain Bar, 1 each 45° and 90° Cutter
and 2 Finished Wrenches

Each Post accommodates a wide range of Bars; commercial sizes of bar steel are adaptable for either Bars or Cutters without machining.

The height of the Bar is easily and quickly adjusted—a turn of the Knurled Ring will raise or lower the base on which the Bar rests; tightening the Set Screw in the head of the Post then locks the whole device instantly, giving an extremely rigid tool.

If Post is desired *without* the Bar, deduct price shown on page 117 for standard size Bar.

Standard size Sleeve Bar will be furnished, unless otherwise specified.

★“AGRIPPA”
PLANING-TOOL HOLDERS

“THE HOLDERS THAT HOLD”

The substantial Bolt-fastening
and serrated Adjustment Ring

This construction
affords most ready
release of Cutter
for easy adjustment.

The serrations in
Holder provide max-
imum number of
cutter adjustments.

Furnished with Cutter and Finished Wrench

For General Description, see page 108.

A rugged, substantial and efficient tool on either Lathe or Planer. Because of its numerous angles of adjustment it also makes an excellent Offset Turning Tool.

The construction assures perfect seat and holding qualities for the Cutters; the convex face of Clamp Nut provides uniform locking pressure for Cutters of either square or rectangular form; the numerous serrations in Holder provide for quick, fine and maximum number of Cutter adjustments unequalled in other designs.

The serrated washer, or Adjustment Ring, which sustains the fastening and working strains, is hardened and tempered. Should it wear in prolonged service, a new Ring *only* is required—not a complete Holder.

 THREADING-TOOL HOLDERS

“THE HOLDERS THAT HOLD”

LOCKABLE-SPRING HEAD
 PATTERN

Furnished with
 Finished Cutter and Wrench

FORMED-CUTTER
 PATTERN

Furnished With
 Finished Cutter and Wrench

For General Description, see page 108

LOCKABLE—SPRING PATTERN

A highly perfected tool for fine and coarse threading, or other Lathe work. The Nut for the Lockable-Spring Head provides for the rigid backing required for heavy cuts; when it is loosened, the Holder becomes a spring-tool for finishing work. It is equally efficient as a Turning-tool. The Cam-fastening is always rapid and positive—the greater the pressure, the tighter the lock.

The cutter, made from High Speed steel, is finished. Each end is ground, the “V” point forming either an angle of 60° for U. S., or 55° for Whitworth Std. threads.

FORMED—CUTTER PATTERN

“Agrippa” Threading-Tools with FORMED CUTTER assure threads that fit perfectly, since in re-sharpening the Cutter, it is necessary to grind its top edge only. Therefore, the point will always retain proper form and angle as originally supplied.

The High Speed Cutter is ground to an included angle of 60° and is backed off for proper clearance. Its rear, flat edge is eccentrically formed; the hardened stop screw, bearing against it, provides positive and accurate adjustment.

Note: "Pitch" means number of teeth per linear inch.

Illustrations above show actual size of Knurling

"Agrippa" Knurls are made to close limits in all respects and, being accurately cut, they assure sharp and perfect teeth in the knurled product. The hole is concentric with and parallel to the cutting face, insuring uniform, clean cut results. All Knurls are made from high grade tool steel and are specially hardened and tempered.

Furnished in pairs to fit standard makes of Knurling Tools and supplied in two Patterns—"Diamond" and "Straight-Line". Three different pitches in each Pattern—Coarse, 14 pitch; Medium, 21 pitch; Fine, 33 pitch; all as illustrated above. When ordering, always specify Pattern and pitch desired.

"Diamond" Pattern, Medium (21 pitch) will be furnished, unless otherwise specified.

"THE HOLDERS THAT HOLD"

High Speed Steel Cutters

Convenient—Efficient—Economical—Superior

(Continued)

Williams' "Agrippa" Holders save all lost time of men and machines waiting for tools. Nearly all tool-grinding time. All blacksmith work. Practically all loss of costly high speed steel.

In order to provide for all regular Lathe operations—Turning, Boring, Threading, Cutting-off and Side Work—in the most economical and efficient manner, six "always ready" Sets of Tool Holders, illustrated on opposite page, have been developed. These combinations of Williams' "Agrippa" Tool Holders offer comprehensive and complete Lathe Service *in a minimum number of tools*, unequalled elsewhere.

One Cutter is included for each Holder, excepting where two are supplied, as follows; one Cut-off and one Side Blade for each Cutting-off & Side Tool-Holder and two Cutters for each Boring-tool Holder. Finished Wrenches are provided throughout.

All Cutters are made from our "Agrippa" High Speed Steel and are carefully hardened in special equipment, assuring uniform and maximum hardness.

Boring-tool Holders will be furnished regularly with Sleeve Bar, as illustrated or, should Plain Bar be specified, at a lower price; see table, page 116.

DROP-FORGED HEAVY SERVICE LATHE DOGS

WITH BENT TAIL AND TWO SCREWS

Safety-for-the-operator and better balance when on the lathe are material improvements which have been attained in this design.

The Screws are of special steel, hardened and tempered, and are threaded U. S. Standard, except that those above 1 inch diameter have eight threads per inch.

By drilling and tapping for the different diameters, the Dogs may be furnished with either Safety or old style (non-safety) Set Screws, but the two types of Screws are not interchangeable, and the safety feature is eliminated if the old style Set Screws are used. Please use numbers and state which Screw is desired.

Dogs with Safety Screws will be supplied, unless otherwise specified.

DROP-FORGED GENERAL SERVICE “C” CLAMPS

The [design [of] these] lighter Clamps enables them to provide the service formerly rendered by the heavier and clumsier steel clamps made by other processes. They are drop-forged from a special grade of strong, tough steel and are heat-treated. This process increases still further their natural stiffness and strength and reduces any liability of springing.

The Screws, fitted with adjustable handle, are made of special steel, hardened and tempered; threaded U. S. Standard. The Swivels are drop-forged.

**"LIGHT SERVICE"
 DROP-FORGED "C" CLAMPS**

Drop-forged from specially selected steel and heat-treated to increase their stiffness and strength and to reduce the liability of springing. Their design is best adapted for use in the various wood and metal working fields which do not demand the extremes of strength and service for which "Vulcan" and "Agrippa" Clamps provide. They take the place of tools less dependable, yet frequently more costly.

The Screws are made from tough, wrought steel and threaded especially for strength and rapid adjustment. Furnished with wrought steel Swivel, as illustrated.

No.	Capacity		Depth Throat from Center of Screw	Extreme Dimensions of Body		Screw		Approximate Weight Each, Pounds	PRICE		No.

A special clamp No. 444, 4" capacity, with throat 1 1/2" deep, can be furnished; details on request.

**“BODY-BUILDERS”
DROP-FORGED “C” CLAMPS**

WITH DEEP THROAT AND SOLID, DROP-FORGED SCREW

Especially designed for body-builders, woodworkers and kindred trades, where the clearance provided by a deep throat is required. They are superior substitutes for less reliable cast tools.

Drop-forged from an unusually strong special steel and heat-treated for maximum stiffness, they combine a deep throat of ample size with dependable strength at minimum weight.

The Screws are drop-forged in one piece, with no handle or wings to loosen, and provide a firm, solid lever, recessed and rounded for easy hand-grip. They are threaded specially for strength and rapid adjustment. Swivels are provided on all sizes.

A special clamp, No. 444, 4" capacity, with throat 1 1/2" deep, can be furnished; details on request.

✦ "VULCAN"
 DROP-FORGED TOOL-MAKERS' "C" CLAMPS

With Plain Screw

With Swivel Screw

These Clamps are drop-forged from a strong, tough grade of steel and are heat-treated after forging to increase further their strength and stiffness and reduce the liability of springing.

The Screws, with wings formed to permit use of lever, are supplied in two styles—Removable-Swivel and Plain. They are drop-forged from a special grade of steel and are hardened and tempered; threaded U. S. Standard.

Clamp bodies are shot-blasted; screws, black.

Packed singly in boxes, or in sets if specified.

Clamps with Swivel Screw will be furnished, unless otherwise specified.

★ "VULCAN"
 DROP-FORGED MACHINISTS' CLAMPS

These Clamps are drop-forged from a strong, tough grade of carefully selected steel; all are heat-treated to increase still further their strength and stiffness and to reduce the liability of springing.

The knurled portion of the hardened and tempered Screws permits rapid and easy adjustment.

The edges of the jaws are ground bright, thus adding to the appearance of the Clamp.

When ordering extra Screws specify whether for *end* or *center*; lengths given are under-head dimensions and prices are for each of either screw.

Each Clamp is packed in a box for convenient shelving.

 EXTERNAL CALIPER GAUGES
 DOUBLE END—UNFINISHED

These are drop-forged from mild steel, suitable for case-hardening. We will supply directions for hardening or will case-harden to order, but we cannot undertake machining.

The lettering-panels and sides of jaws are on same plane and may be finished by a single grinding or polishing operation.

The special size of the measuring-jaw or pad provides for unusual advantages; five classes of gauges may be made from one forging;

1. Plain gauge; same dimensions both ends.
2. Gauge with one end of exact dimension, other end for two limits allowed.
3. Gauge with any two dimensions within range of table limits.
4. Gauge of the "go on" and "not go on" variety; two combinations.
5. Plain gauge; four dimensions.

†Furnished from stock till supply is exhausted; thereafter only on special order.

Type B

These are drop-forged from a fine grade of steel that drills and taps readily; they are furnished either Blank or Tapped, tumbled smooth.

Nuts tapped U. S. Standard threads in stock. Whitworth Standard furnished at regular prices; **other threads to order**. Unless otherwise specified, orders for Tapped Nuts will be supplied with U. S. Standard threads.

Tapped Nuts have base faced at right angle to hole.

Special sizes and shapes and Tobin Bronze Nuts to order.

When tapping is ordered, a commercial product is furnished. If additional accuracy is required an extra charge, consistent with the special requirements, will be made.

When ordering indicate pattern (A or B) by letter.

Blanks will be furnished, unless otherwise specified.

DROP-FORGED THUMB SCREWS

All Types Furnished Either
 BLANK, OR THREADED

See List opposite page

Drop-forged from a fine grade of steel that threads readily and are tumbled smooth. Special sizes and shapes and Tobin Bronze Screws to order.

Type G is made in 1/4, 5/16 and 3/8 inch diameters in all regular lengths.

Dies for the following Screws have not yet been made, consequently these sizes are not now carried in stock; 7/16 inch diameter Type B, 9/16 inch diameter Types A, B, E and F, 5/8 inch diameter Types E and F, 3/4 inch diameter Types A, B, D, E and F.

Threaded Thumb Screws, except Types C and E, over 4 inches long have threads running up only 4 inches.

Lengths, longer than those listed, can be furnished specially from available dies; intermediate lengths take price of next longer length plus an extra charge for cutting. Electric Welding to order only.

Screws with U. S. Standard threads in stock. Whitworth Standard supplied at regular prices; **other threading to order.** Unless other threads are specified, Threaded Screws will be furnished with U. S. Standard threads.

Screws with special points can be supplied to order.

When ordering indicate pattern by letter.

Blanks will be furnished, unless otherwise specified.

When threading is ordered, a commercial product is furnished. If additional accuracy is required an extra charge, consistent with the special requirements, will be made.

✦ "VULCAN"

DROP-FORGED HOIST HOOKS

The Hooks with the Orange Tip

SHANK PATTERN

All "Vulcan" Hooks are tipped with orange for ready identification by the user and to indicate the unusual and extreme care with which they are made.

Heat Treating. After forging, every "Vulcan" Hook is accurately heat-treated for maximum strength and toughness—the liability of breakage is reduced to the minimum.

Proof-Testing. To insure proper service at listed capacity every hook, after heat-treatment (*see next page*)

†Shanks of Nos. 13, 14, 15, 15A, 16 and 16A can be made longer if desired at an additional charge of \$.55, .80, 1.05, 1.30, 1.40 and 1.75 (list price) per extra inch or fraction thereof, respectively.

‡15A and 16A Hooks are made from special alloy steel; others from carbon steel.

DROP-FORGED HOIST HOOKS

The Hooks with the Orange Tip

EYE PATTERN—WELDLESS

(Continued from preceding page)

is proof-tested to *fifty per cent beyond* its rated "Safe Working Load." Each Hook so tested is stamped **O**, as illustrated, and hence can be readily identified as "*proof-tested*."

Use the Hook with the orange tip—no other standard line offers such assurance of safety and care in manufacture.

For Safety Chains on railroad cars, a Hook, approximately No. 27 in size and with eye at right angle, can be furnished to order in reasonable quantities; see small illustration. Full size drawing on request.

Tobin Bronze Hooks from standard or special dies to order in quantities; prices on application.

‡36A Hook is made from special alloy steel; others from carbon steel.

 WIRE ROPE SOCKETS
 OPEN PATTERN

These are drop-forged from a fine grade of steel, making them superior in strength and finish to the heavier hand-made product. Numerous tests show their strength is greater than that of the strongest wire rope made.

The Pins are made of a superior grade of steel to obtain high shearing strength.

Furnished regularly, complete with split-pin.

WELDLESS EYE BOLTS

PLAIN PATTERN

Blank or Threaded

These carbon steel Eye Bolts are specially heat-treated, after forging, to increase further their strength and toughness and reduce the liability of breakage.

To insure proper service at listed capacity, every Eye Bolt, after heat-treatment, is proof tested before threading to *fifty per cent beyond* its "Safe Working Load."

Each Eye Bolt so tested is stamped **○** near its piece number, which appears in raised letters on the forging, and hence can be readily identified as "*proof-tested*".

U. S. Std. Threaded Eye Bolts of Standard length are in stock; threaded prices are for these with either U. S. or Whitworth Std. Threads; longer lengths and special threads extra.

Tobin Bronze Eye Bolts for marine work from standard or special dies to order in quantities; prices on request.

Eye Bolts can be galvanized to order at extra cost. Prices given for special Eye Bolts on receipt of drawings, or models and specifications.

(Continued on following page)

When ordering, please state whether Blank or Threaded are desired; Blank (shank not threaded) will be supplied, unless otherwise specified.

★“VULCAN”
WELDLESS EYE BOLTS
SHOULDER PATTERN

Blank or Threaded

(Continued)

On Threaded Eye Bolts of Shoulder Pattern the thread runs within 1/8 to 3/8 inch of shoulder, which is faced.

Prices for either Plain, or Shoulder Eye Bolts of “Extra Lengths” apply only to forgings which may be in stock at time ordered.

To determine *List Price* for *Threaded* Eye Bolts of other than standard length:—

1. Determine price of Blank (see A, B and C in table).
2. Add for threading (see D).
3. If quantity is less than 100 of same pattern and shank diameter, shorter or longer than standard, add \$2.00 NET for the lot to cover “set-up” charge.
4. Shorter lengths than standard take Standard Threaded List, plus “set-up” charge, if any.

Example:—50 No. 28—8" long, Threaded 3"

Blank—Std. Length 2"...(A).....\$.30

Extra to Max. 5".....(B)..... .24

Additional 3" @ 12c....(C)..... .36

Threading—3" @ 6c....(D)..... .18

LIST PRICE, Each.....\$1.08

“Set-Up” NET charge, \$2.00 extra for the lot

When ordering, please state whether Blank, or Threaded are desired; Blank (shank not threaded) will be supplied, unless otherwise specified.

SPECIAL DROP-FORGINGS TO ORDER

Drop-forgings are used in vast quantities for a wide variety of mechanical purposes. They are made of aluminum, bronze, copper, iron and steel.

Their quality depends upon the material and the care and skill used in their manufacture. Our Chemical Laboratory checks all material as received; our Physical Laboratory tests forgings while in process and upon completion; our skill has been developed by half-a-century's experience in producing our standard stock tools and innumerable special designs to order.

MATERIAL

The material usually employed in making drop-forgings is bar steel. By carrying thousands of tons of assorted grades, shapes and sizes, many orders for special forgings can be completed without waiting to obtain the material. This is often a great convenience to our customers, particularly in the case of new dies, where the correct size of metal required cannot always be definitely determined until the tools are completed and tried.

SPECIAL DROP-FORGINGS TO ORDER DIES

Our facilities for sinking drop-forging dies, from the smallest, weighing only a few pounds, to massive blocks of several tons weight each, are unexcelled. Charges, when made for the use of dies, include but a portion of their cost and do not convey the right of removal from our works; we cannot sell or part with the tools. We assume the risk and expense of their breakage and maintenance; the customer controls their use, as we will not make forgings from them without his written authority.

SPECIAL DROP-FORGINGS TO ORDER

ESTIMATES

Dies are made to conform to a drawing; they usually differ from the finished part by the addition of the stock for removal in finishing and by the necessary draft, or taper, to permit drawing the forgings from them. Draft is seldom less than seven degrees—frequently it is more. Before sinking dies, we always submit to the customer for approval, a blue print showing the addition of the stock to be removed in finishing and the draft, with such other modifications as may be necessary.

When estimates are desired, therefore, send us a model, or drawing, of the part and state whether it shows “forging size” or “finished size”, the quantity of forgings wanted and the material of which they are to be made. If the model, or drawings shows “finished size,” tell us what surfaces are to be finished. We usually add at least $\frac{1}{32}$ inch on each surface to be machined. On large forgings, such as crankshafts, we add $\frac{1}{16}$ to $\frac{1}{8}$ inch; on small pieces, requiring only grinding or polishing, $\frac{1}{100}$ inch is allowed.

We can often save customers expense if informed of the use for which the forgings are intended. The price is largely affected by the quantity made with one setting of the tools; it costs as much to set dies for 100 as for 1000 pieces, and the forging work is also more costly per unit in small lots. Prices for special drop-forgings are made per piece, not per pound, and vary with the nature of the work, the material used and the quantity taken at one time.

Drop-forgings sometimes require the use of several sets of tools; the “breakdown” and “finishing” dies and trimmers, together with the length of bar steel, and the various stages of manufacture of such a part, are shown below.

SPECIAL DROP-FORGINGS TO ORDER EQUIPMENT

Our forging equipment consists of Board Drops from 300 to 3,000 lbs., Steam Drops from 2,500 to 12,000 lbs., Steam Hammers, Trip Hammers, Upsetting Machines
(Continued on next page)

SPECIAL DROP-FORGINGS TO ORDER

EQUIPMENT (Continued)

(sometimes called "Headers"), Bulldozers, Hydraulic Presses, Electric Welding Machines, Rolls, Shears, Hot and Cold Sawing Machines, Shot-blasting Machines, etc., etc.

SPECIAL DROP-FORGINGS TO ORDER

EQUIPMENT (Continued)

On the preceding page and below are shown batteries of Board Drops, also a "close-up" of a 3000 lbs. Hammer of this type. Many of these Board Drops are provided with trimming Presses for removing, while the part is still hot, the surplus metal, or "flash," which flows out between the dies during the forging process. These "hot" Presses are also used to cut the forging from the end of the bar of metal from which it has been made. Where the size and shape of the piece are such that this trimming operation can be performed after the forging has cooled, "cold" Presses are used. A battery of these machines is illustrated below.

SPECIAL DROP-FORGINGS TO ORDER

EQUIPMENT (Continued)

Our Upsetters are of sizes suitable for stock up to 6 inches diameter; our Shears cut steel bars, cold, 5 inches square.

SPECIAL DROP-FORGINGS TO ORDER

HEAT TREATMENT

Our Annealing, Case-hardening and Heat-treating facilities are complete and of the most modern type. Automatically controlled rotary hearth electric furnaces, Homo electric furnaces and oil-fired furnaces of large capacity, all equipped with recording pyrometers. The methods and processes employed are all specified and controlled by our Metallurgical Department, directed by a highly trained technical staff.

SPECIAL DROP-FORGINGS TO ORDER SHOP TRANSPORTATION

Many modern conveniences to aid in the economical movement of forgings during the process of manufacture are employed. These include locomotive crane for switching cars and handling steel, gasoline tractor (shown hauling ashes to fill in depressions in yard surface), electric lift-trucks, in addition to hand lift-trucks, traveling cranes, etc., etc.

INSPECTION

All of our product is carefully inspected by experienced men employed only on this work and every precaution is taken to insure none but perfect forgings leaving our plants.

GUARANTEE

We guarantee all forgings to be free from imperfections of workmanship and material. We will gladly replace, without charge, any which prove defective, but we cannot allow claims for labor, or damages.
